Soffit Grey Eucalyptus

Product: NATURFLOOR-W 11.4" (290 mm) no bevel
Wood: Olivier Ash

Ultra low maintenance

Parklex Prodema uses proprietary resin-based technology to protect the wood from Day 1, making it appropriate for continued use. No ongoing maintenance such as sanding, lacquering, oiling etc. is ever required. Just a wash with a damp mop, or with a PH neutral cleaning solution if necessary.

Watertightness and moisture resistance

The company has developed its own technology to protect the wood surface and equip Parklex Prodema floors with a high level of resistance, and this, along with the Bakelite coating on the back of the boards, makes NATURFLOOR-W a watertight floor that is 100 % resistant to water and moisture.

Wear and abrasion resistance

Parklex Prodema NATURFLOOR-W floors have been designed for use in high-traffic areas with strict usage specifications, and where the beauty of the wood should be kept as good as new. They have the most stringent abrasion criteria (AC6).

Slip resistance

The Parklex Prodema flooring range meets all the essential requirements in regards to slip resistance, so the user's safety is guaranteed in areas where it is necessary to have strict safety regulations in place, such as at emergency exits, ramps, stairs, damp areas, etc.

Scratch resistance

Parklex Prodema floor surfaces have been developed to prevent scratching by sharp or pointed objects. The product will not be damaged by office swivel chairs or furniture in general.

Impact resistance

Thanks to the Bakelite coating on the natural wood veneer, Parklex Prodema floors can absorb the impact of falling objects, heel marks and other heavy rolling loads without affecting the appearance.

Reaction to fire

NATURFLOOR-W floors have obtained the highest possible classification in reaction to fire for organic materials.

Light fastness

One of the greatest concerns regarding the use of wood flooring is how the tone evolves over time, particularly in areas exposed to sunlight. Our wood protection technology, combined with the development of a film to protect against UV radiation, ensure that the wood evolves gently and consistently over its useful life, without having to apply subsequent protective measures.

Stain resistance

NATURFLOOR-W floors are made of natural wood veneer that is fully protected against external aggression on their surface. Contact with substances such as: bleach, ammonia, nail varnish, coffee, red wine, among others, will not cause any aesthetic damage to the material. Regular cleaning using water and a ph-neutral cleaning product will easily remove any dirt, to leave no visible stains.

10-year warranty

Our commitment to continually improve the quality of our products enables us to offer a 10-year warranty for NATURFLOOR-W floors.

VILLA A ATOTXA-ERREKA
IZASKUN LARZABAL
Product: Eukalyptus
San Sebastian, Spain

1. Board sizes

7.4" x 96" (188 x 2450 mm)
 11.4" x 96" (290 x 2450 mm)
 23.2" x 96" (590 x 2450 mm)

2. Surface finishes

Satin

With a slightly satin, smooth surface, reflects light less significantly than a gloss finish.

Woodskin Matt

Finished with a natural texture, where one can feel the grain and knots from the original wood. Light refraction is minimal, similar in appearance to an oiled finish, matte in nature. It provides the best results in slip resistance.

3. Board joint design

1. Non-bevel joint
2. Bevel on the long side only
3. Bevel on all sides

4. Installation patterns

Running bond 1/4

Brick bond 1/2

Multiple board widths

Boards run at 45°

In order to install NATURFLOOR-W following other installation patterns, please consult the Parklex Prodema technical department.

EL EQUIPO CREATIVO
•Product: Flooring American Oak

Our wall and ceiling products are available in 17 wood species. The Textured surface provides a slight satin appearance, providing the physical sensation of the grain and knots in the original wood veneer.

Wood is a natural product; therefore, each veneer must be considered as unique. Slight differences in colour, grain and structure is completely normal. Peculiarities such as knots or resin inclusions are not defects and should always be considered as part of the decoration. Depending on the species and origin of the wood, there are differences in light fastness behaviour. For this reason, no claims will be accepted based on differences/changes in tone between the sample and the final product.

NATURHARDPANEL-W

Thanks to the technical leak-tightness and damp-resistant properties of the natural wood's veneer, NATURHARDPANEL-W gives a special feeling of warmth in indoor environments that are frequently in contact with water.

- A – Damp-resistant layer
- B – Natural wood veneer
- C – HPL core
- D – Protective film on rear
