The Italian excellence in the wood dyeing technology

TABU PRESENTATION

90 years of an idea - History of three generations

TABU was founded in 1927 in Cantù, Italy, in the heart of Lombardy, and it represents today the Italian excellence in the wood dyeing technology. With the third generation involved, it is present in more than 65 countries worldwide: it produces natural dyed veneers and multilaminar wood veneers collected in the extraordinary 555.18 Collection, the widest wooden collection in the world. Different products suitable for different sectors of activity with the major presence in hospitality, yacht industry and automotive.

TABU MISSIONS

UNIFORMITY of wood veneer

Homogeneity, repeatability and standardization of a natural product.

ENVIRONMENTAL PHILOSOPHY

Discover our green path. Attention to all production sectors with environmental and social respect.

QUALITY

ISO 9001 certification and automotive quality mindset

R&D

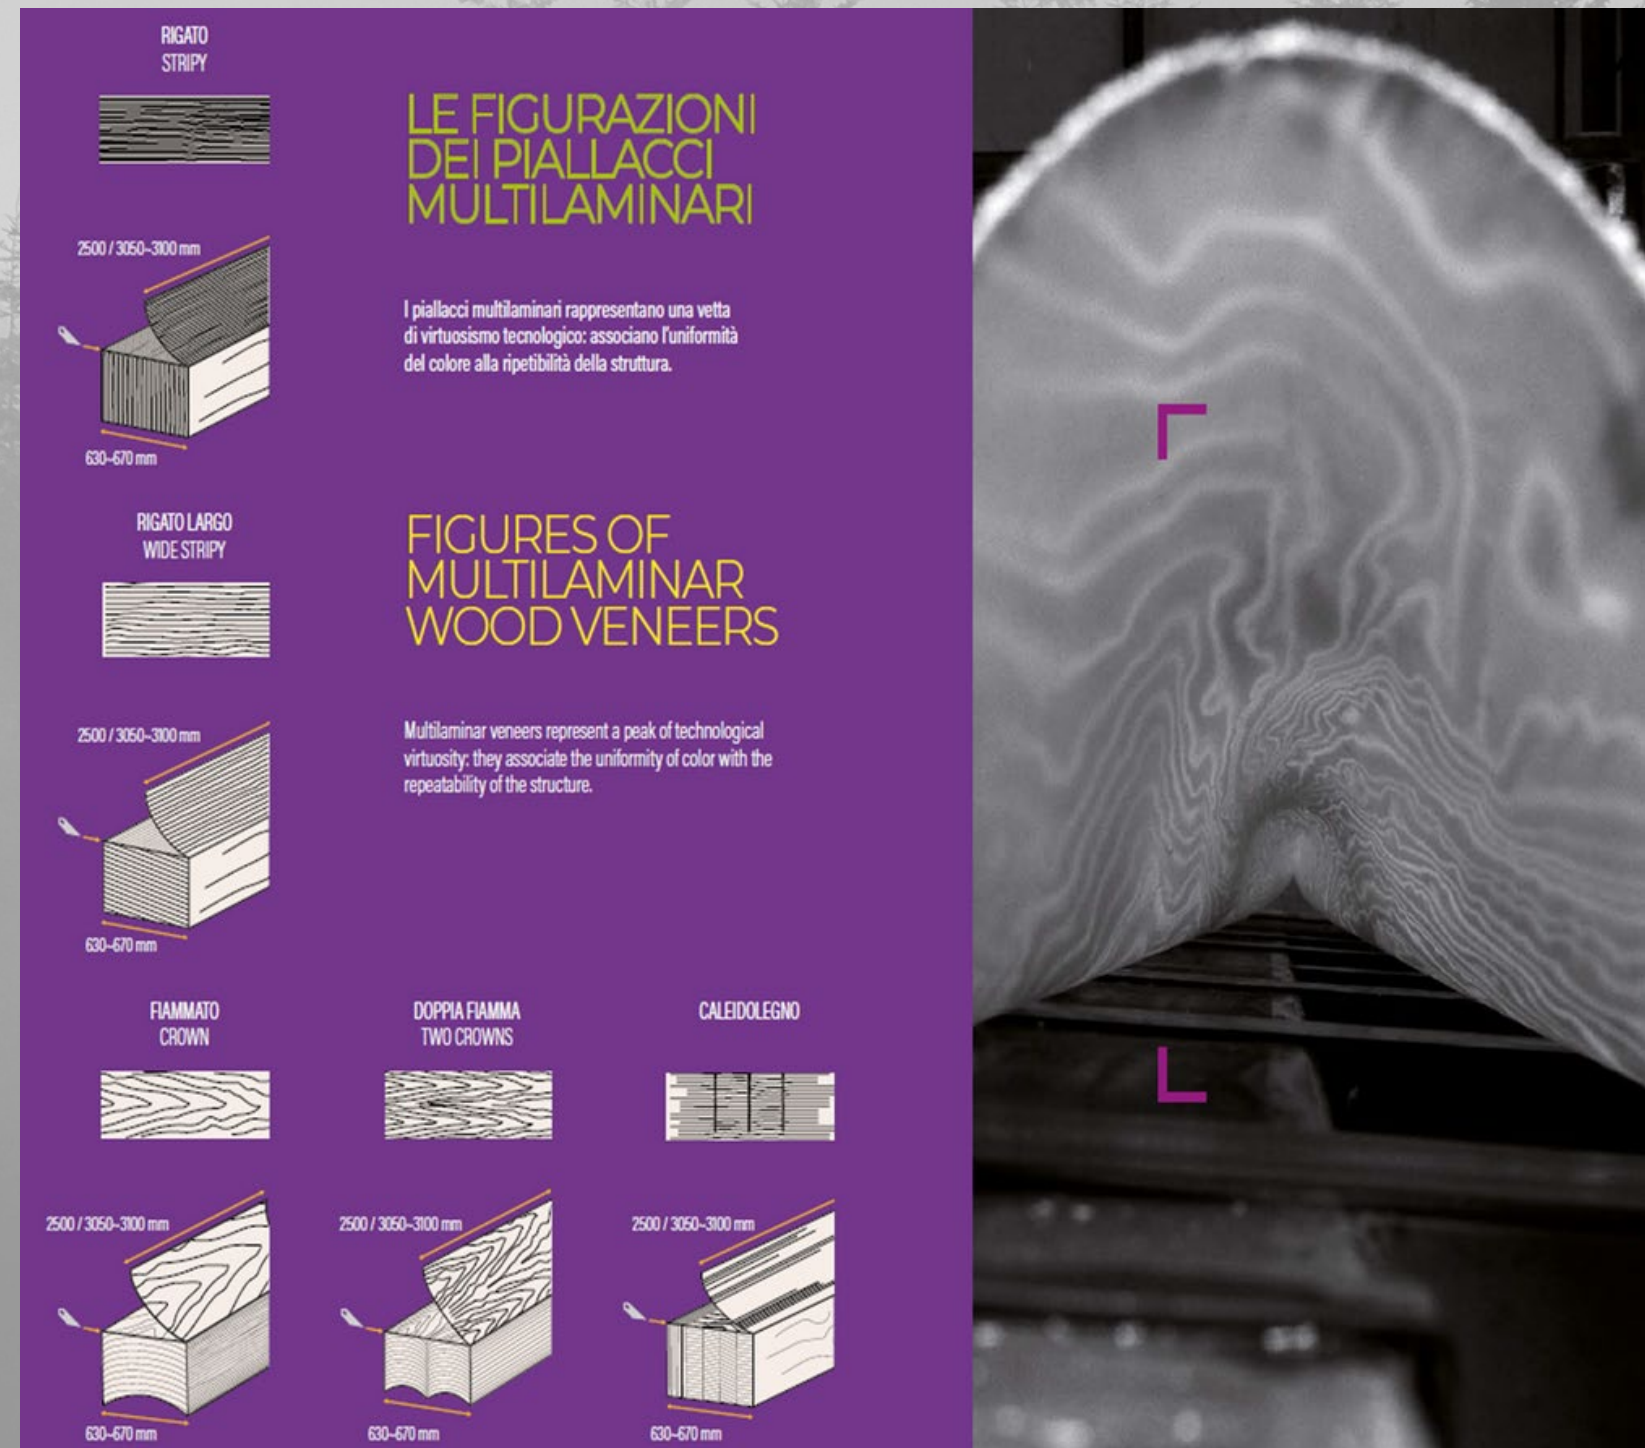

Continuous and incessant research to bring Tabu to an endless higher level.

VENEER PRODUCTION

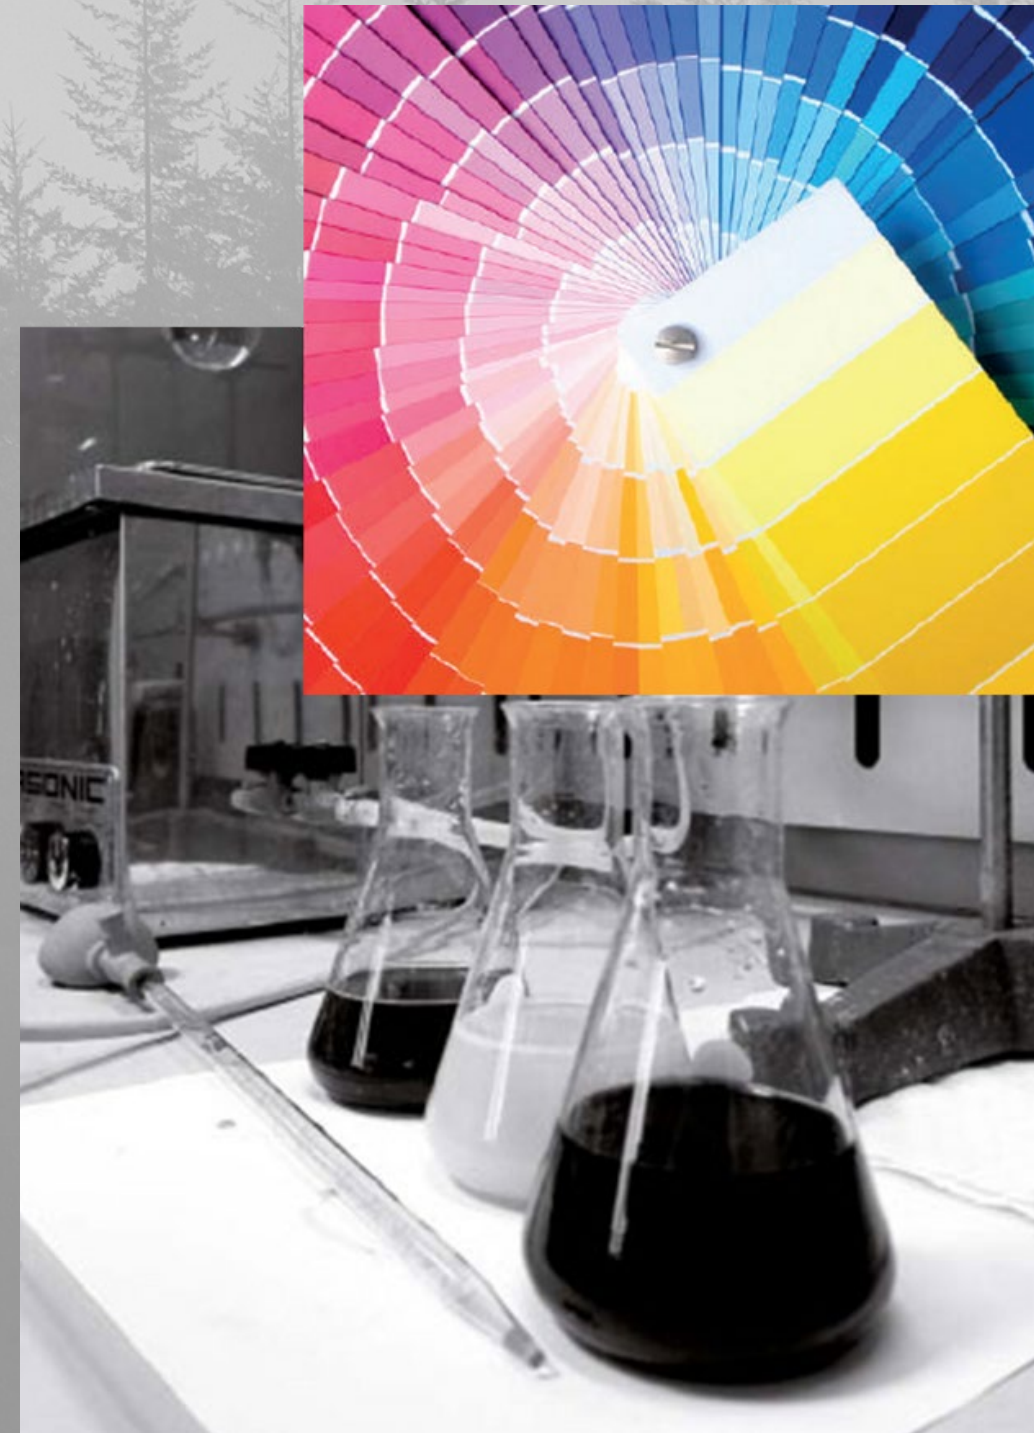

Starting from the log, we produce natural veneers, where, based on way of cutting, we determinate the design and structure.

The multilaminar wood is composed of several “sheets” that, after being individually dyed, are assembled so as to obtain veritable solid woods from which the veneers will be then sliced. The assembling and the final cutting methods determinate the optic design of the product .

DYED VENEER PRODUCTION

- Wood is a living material and each log is unique; Wood dyeing technology gives the possibility to make the aesthetic features of veneers homogeneous, ensuring color consistency
- The wood dyeing technology underlines the natural three-dimensional structure of certain woods, like in the cases of Burls and Figured or Pomelé veneers.
- The R&D Laboratory is the heart of TABU and is equipped with the most advanced equipment
- New color solutions are designed and tested. Here custom colors are created.
- Various tests are carried out here, such as light resistance test and others

TABU PRODUCTS

Natural Veneers: thin wood sheets cut from a tree mostly for interior decoration, for multiple sectors of activity.

Dyed Veneers: veneers colored through all the thickness for color homogeneity and uniformity responding to both design and technical purposes.

Multilaminar Wood Veneers (MW): thin wood layers cut from a block into veneer sheets where colour is totally controlled and structure created by engineering process.

ADDITIONAL PRODUCTS..be inspired by

Graffiti is the collection that includes industrial inlays done with the most sustainable wood species combining the updated technology in laser cutting with the assembling skills of multiple wood species.

CIRCULAR ECONOMY ON WOOD

R E T H I N K I N G
T H E — F U T U R E

Anthology One

RETHINKING THE FUTURE - ANTHOLOGY ONE

ReThinking the Future - Anthology One Collection is faithful to our vocation of avant-garde: it is hinged to our paradigm of Innovation of the product and Circularity, understood as efficiency in the use or rational and appropriate reuse of all resources during all phases of the production cycle. Simultaneously the newly rediscovered natural dyed veneers enhanced in their biodiversity, the latest-generation multilaminar wood veneers, created by an increasing optimal use of the noble raw material, the industrial inlays (Graffiti Collection) find their peculiarity in the powerful "musical score".
